

ABDUL HAMEEM

Software Developer & Automation Engineer

PROFILE

Software & automation developer with about 2 years of experience at Imara Software Solutions, building full-stack web applications end-to-end, designing automation workflows, and building AI-assisted document processing pipelines for clients.

EXPERIENCE

● Software & Automation Developer

Imara Software Solutions | March 2024 — Present

Build and maintain full-stack web applications (Laravel, PHP, React, Next.js) and automation workflows (Make.com, Zapier, n8n). Also built and maintain a production document-extraction service (Python, FastAPI, GPT-4o Vision, Quickbase API) for a healthcare DME provider client — ~30 documents/day, ~100 seconds end-to-end.

- Diagnosed a data-integrity defect where case-sensitive email identifiers collided under case-insensitive database matching, silently merging 148 of 902 records and mis-parenting 607 child rows; designed a hash-based key replacement and migrated the live system with zero data loss.
- Found a clinical-condition field firing on unrelated evidence in 68% of cases; traced it to a validation library the pipeline had never read, wired it in as a deterministic gate, and cut the false-positive rate to near zero.
- Built a Flutter Android POS/inventory app for small business retailers, and Python-based web scraping tools and data pipelines feeding internal systems and automations.

SELECTED PROJECTS

EC Zoone — eczoone.com

Live e-commerce storefront for beauty and skincare products, with multi-store cart, filtering and a full checkout flow.

Retail Hub

Flutter Android POS & inventory app for small retailers — sales, customers, repackaging, income/expense tracking.

LinkedIn Profile Scraper & Social Media Summarizer

Make.com automation scenarios integrating PhantomBuster, Airtable and OpenAI for lead generation and content workflows.

CORE STACK

- Laravel & PHP
- React & Next.js
- Python & FastAPI
- Flutter (Android)

AUTOMATION & AI

- Make.com / Zapier / n8n
- GPT-4o Vision
- OpenAI API

TOOLS

- MySQL / PostgreSQL
- REST APIs
- Git & GitHub
- Docker / Postman
