

ABDUL HAMEEM

Software Developer & Automation Engineer

PROFILE

Software & automation developer with about 2 years of experience at Imara Software Solutions, building full-stack web applications end-to-end and designing automation workflows that remove repetitive manual work from business processes. Also builds AI-assisted document processing pipelines under contract for external clients.

EXPERIENCE

● Document Extraction Pipeline — Freelance / Contract

Healthcare DME Provider (US) | 2025 — Present

Built and maintain a production service (Python, FastAPI, GPT-4o Vision, Quickbase API) that ingests clinical fax/email attachments, extracts structured order and clinical data with a vision model, and writes to a Quickbase app used for insurance documentation (~30 documents/day, ~100 seconds end-to-end).

- Diagnosed a data-integrity defect where case-sensitive email identifiers collided under case-insensitive database matching, silently merging 148 of 902 records and mis-parenting 607 child rows; designed a hash-based key replacement and migrated the live system with zero data loss.
- Found a clinical-condition field firing on unrelated evidence in 68% of cases; traced it to a validation library the pipeline had never read, wired it in as a deterministic gate, and cut the false-positive rate to near zero.
- Hardened the write path against non-deterministic model output — malformed responses, unstable classifications, duplicate identifiers — turning silent data loss into logged, reviewable rejections.

● Software & Automation Developer

Imara Software Solutions | March 2024 — Present

- Built and maintain full-stack web applications using Laravel, PHP, React and Next.js, from database design through to production deployment.
- Designed and deployed automation workflows in Make.com, Zapier and n8n that remove repetitive manual work from business processes.
- Developed Python-based web scraping tools and data pipelines, and a Flutter Android POS/inventory app for small business retailers.

SELECTED PROJECTS

EC Zoone — Live e-commerce storefront for beauty/skincare products (eczooone.com).

Retail Hub — Flutter Android POS & inventory app for small retailers.

LinkedIn Profile Scraper & Social Media Summarizer — Make.com scenarios integrating PhantomBuster, Airtable and OpenAI.

SKILLS

- Laravel & PHP
- React & Next.js
- Python & FastAPI
- Flutter (Android)
- Make.com / Zapier / n8n
- GPT-4o Vision / OpenAI API
- MySQL / PostgreSQL
- REST APIs
- Git & GitHub
